

D3 T-Factor Front Boot 2024

The T-Factor is newest addition to the D3 binding family. Like the Leverage the T-Factor delivers comfort and performance on a traditional rubber binding platform.

Designed from the ground up by D3 Pro Skier Terry Winter the T-Factor is the result of more than a year of R&D and testing. The T-Factor features a smooth micro-fiber suede overlay blended with a rubber insert creating firm lateral support for superior edge control. "Smooth" was a frequent comment from the skiers testing the T-Factor. This smooth, forgiving ride is a result of the soft forward and aft flex the T-Factor delivers. With high-tech bungee in the upper cuff lace location and smaller, softer bungee in the lower lace location the T-Factor is comfortable and a breeze to put on. The T-Factor rear boot comes standard with the new D3 UNI-Plate which accommodates both D3 and HO insert patterns.

As Terry explains "One of the biggest differences with the T-Factors is that they are a front-lace binding. This enhances the binding in two ways: It allows for a much wider space to open up when putting the binding on, and it allows for a more natural, uninhibited flex to the rear from the apex of the turn into the acceleration out of the turn. Laces in the back make the rear flex stiffer, and this can cause the tip of the ski to rise out of the turns. With the rear-lace binding the flex allows for some shift in body weight out of the finish of the turns, so even if you do fall slightly back before acceleration the tip of the ski will not rise out of the water. With the whole ski in the water there is no delay in acceleration, and the edge control of the ski is more secure."

Performance category

beginning slalom course to tour pro.

Sizes : XS, S, M, L, XL (see sizing chart)

Weight (each)
2lb 10oz (medium)

Construction
EVA- rubber blend toe.
100% high-elasticity rubber heel.
Micro Fiber Suede hyb
